SUMMARY

Solutions Architect and Full Stack Engineer with nearly 5 years building fintech products for Banco Pichincha and **Deuna**, Ecuador's leading digital wallet (3M users, ~800K active). Promoted from frontend developer to full stack engineer to architect, and twice named Banco Pichincha's **Best Developer**. I lead a cross-functional team of 9, own solution design for new initiatives, and drove the re-architecture and stability program that **cut the share of users hitting errors from 15% to under 2%**. I built the saga-based workflow framework on Restate that the whole organization now uses. I've also built an AI-native engineering workflow on Claude Code that moved my team's delivery bottleneck from development to QA. I started in mechatronic engineering and international project leadership, and I've kept the habits from that work: I own things end to end, coordinate across teams, and stay calm when production is on fire.

CORE SKILLS

Architecture: Microservices, Event-Driven Architecture, Sagas & Durable Execution, CQRS, DDD, Clean Architecture, Micro Frontends, BFF, Solution Design

Backend & Data: TypeScript, Node.js, NestJS, GraphQL, REST, Apache Kafka, Restate, Python · PostgreSQL, DynamoDB, Redis, MongoDB, Firestore

Frontend & Mobile: React Native, React, Next.js, Angular, Vue, Redux

Cloud & DevOps: AWS, Kubernetes, CI/CD, GCP / Firebase, Serverless

AI-Native Engineering: Claude Code, agentic development workflows, custom agent skills, AI-assisted code review, TDD with agents; integrated with Jira, GitHub and Confluence

Leadership: Team leadership & mentoring, incident command (war rooms), backlog definition with Product Owners, cross-team architectural alignment

EXPERIENCE

Devsu, Lima, Peru (Remote)

Mar 2022 – Present

Software consultancy. Long-term engagement with Banco Pichincha, Ecuador's largest bank, and its fintech Deuna.

Solutions Architect · Deuna (Banco Pichincha) Apr 2026 – Present

- Lead a cross-functional team of **9 engineers** (3 frontend, 3 backend, 3 QA) on Ecuador's leading P2P and QR payments app (3M users, ~800K active, continuous releases on Android and iOS). Define and prioritize stories with Product Owners.
- Own end-to-end solution design and key architectural decisions for new initiatives across the mobile app and its backend services. Maintain architecture diagrams and align with architects across the organization.
- Led the re-architecture of a platform that had grown unchecked for years: service migrations, microservice restructuring and new modules.
- Led the stability program that **reduced the share of monthly users experiencing at least one error from 15% to under 2%**. Identified root causes with the team and prioritized and delegated fixes.
- Designed an **agentic development workflow** on Claude Code, integrated with Jira, GitHub, Confluence and Android emulators. It takes a feature from ticket to solution design, TDD implementation, a PR with visual previews, and AI code review. Built custom skills for documentation, architecture diagramming and codebase exploration, and rolled the workflow out to the team. **The delivery bottleneck moved from development to QA.**
- Lead war rooms during critical production incidents and unblock complex technical problems across teams.

Full Stack Developer · Deuna (Banco Pichincha) May 2024 – Apr 2026

- Joined the Onboarding team as a React Native developer, then moved into backend work as demand grew and became a full stack engineer (NestJS, CQRS, Kafka, DynamoDB, PostgreSQL, Redis).

- **Designed and built an internal framework over Restate** (durable execution) that implements the Saga pattern with automatic retries, compensations and orchestration. **Adopted organization-wide** as the standard for asynchronous workflows.
- Led improvements to the onboarding experience: regularization flows, teen onboarding, enrollment and re-enrollment for young users, and a complex account closure and reopening process.
- Built self-service account management flows (email and password updates). Defined API contracts with backend engineers.

Frontend → Full Stack Developer · Banco Pichincha Mar 2022 – May 2024

- **Best Developer award, Banco Pichincha: 2022 and 2023.**
- **New Onboarding "Transactional Account":** Frontend lead on a full rebuild of digital client and account creation: 30 microservices rewritten and the web app migrated to micro frontends. Designed and built every micro frontend and every BFF service (React, Angular, Node.js, GraphQL).
- **Onboarding "Unique Accounts":** Led the frontend team delivering savings accounts for minors inside the mobile app. **Cut account creation time by 85%.** Designed the micro frontend intercommunication architecture.
- **Onboarding "Flexible Account":** One of two core developers on this greenfield app. Chose the stack, defined the architecture and reverse-engineered undocumented legacy services.
- **Onboard Express:** Lead developer. Refactored the WebView integration into a reusable module that all later in-app integrations adopted.
- **Pichincha Mundialista** (FIFA World Cup 2022 campaign): Led the frontend team to on-time delivery under a fixed campaign deadline.
- Between engagements, built features on Devsu's internal talent platform *Profile* (Next.js, Firebase, GCP) and helped standardize internal development processes.

Career Transition to Software Engineering

Apr 2021 – Feb 2022

- Self-directed full-time training in JavaScript, TypeScript, React, Node.js and AWS, building personal projects ranging from app clones to fully automated web services.

AGP Group, Lima, Peru

Jan 2020 – Apr 2021

Global manufacturer of advanced specialty glass (laminated, tempered and armored).

Project Leader (promoted from Projects Trainee)

- Led complex projects the plant couldn't run without dedicated ownership. Covered technical process validation, automation, sourcing and coordination across product development, engineering, quality, purchasing, warehouse, logistics and production.
- Managed commercial relationships with international clients, including French and Japanese accounts, in English. Negotiated pricing, schedules and requirements.
- Traveled to the Colombia plant to transfer know-how developed in Peru so the local team could implement the project there.

Mine Sense for Miners (MS4M): R&D Intern

Mar 2019 – Jun 2019

- Designed mechanical, electronic and software solutions for telemetry and computer vision in mining fleets.

EDUCATION

B.Sc. Mechatronic Engineering, Pontificia Universidad Católica del Perú (PUCP) · *Top 10% of class* 2014 – 2019

TRAINING

- **A Cloud Guru:** AWS Solutions Architect Associate, AWS Developer Associate, Kubernetes Deep Dive, Azure Fundamentals AZ-900 (2022–2023)
- **Udemy:** Next.js & React, Modern React with Redux, The Complete Node.js Developer, CSS: The Complete Guide

LANGUAGES

Spanish (native) · English (C1, Cambridge Certificate in Advanced English)
